XUNTA DE GALICIA
CONSELLERÍA DE CULTURA, EDUCACIÓN
E ORDENACIÓN UNIVERSITARIA

Juan C Mareque-Rivas

Aug 2016-present: Professor of Chemistry, Co-Head and Research Lead, Department of Chemistry, College of Science, Swansea University, Singleton Park, Swansea, SA2 8PP. Tel.: (+44) 01792 513195; Email: juan.mareque-rivas@swansea.ac.uk

Jan 2011-present Ikerbasque Research Professor and group leader of the Theranostic Nanomedicine Laboratory,CIC biomaGUNE, San Sebastian, (+34) 943 005313; Email: jmareque@cicbiomagune.es

Sept 2015-Aug 2016 Reader in chemical engineering, School of Engineering, University of Aberdeen

March 2000-Jan 2011 Lecturer, Senior Lecturer School of Chemistry, University of Edinburgh

Oct. 1998-Sept. 2000 Postdoctoral Associate, Department of Chemistry, MIT

Sept. 1995-Sept. 1998 – Ph.D. in Supramolecular Chemistry, University of Missouri- St. Louis (Mallinckrodt Award and Best UMSL PhD Student Award); **Sept 1990-June 1995** – Licenciatura in Chemistry, Universidad de Santiago de Compostela and BSc Hons in Pure and Applied Chemistry, University of Strathclyde.

Research interests summary: My research is focused on how to design, synthesise, characterise, assemble, fabricate, operate and develop functional molecular systems (drug delivery vehicles, sensors, motors, actuators, and other molecule-based devices and machines) for different applications. I have an interest in integrating chemical, biological and electronic functions; on how to mix molecular building blocks on a single platform; how to retain/enhance function in moving from solution to a surface and from bulk to the nanoscale; surface functionalization of nano- and microparticles and for devices; understanding and resolving the interference between building blocks; molecules, materials and systems that display stimuli-responsiveness. My lab seeks the development and screening of novel types of organised nano/microscale architectures that are spontaneously self-assembled from multiple components and which when combined together exert special (therapeutic, diagnostic, molecular recognition, sensing or catalytic) functions. An important current focus in the lab is the design, development and study of molecules and nanoparticle constructs for immunomodulation and cancer immunotherapy.

Current projects:

- HORIZON 2020. (M-ERA.NET). MediSURF. Designed nanostructured bioactive surfaces for precision medicines €70.000 (Co-I and PI for CIC biomaGUNE).
- HORIZON 2020 (H2020-MSCA-ITN-2015), PET3D. PET imaging in drug design and development. € 3.917.495,16 (Co-I and PI for CIC biomaGUNE; 495.745,92 €).
- MINECO-Spain. CTQ2014-54761-R. Development of chemoimmunotherapeutic nanomaterials against metastatic cancer (PI). 177,870 € + FPI PhD studentship.
- HORIZON 2020 (H2020-MSCA-ITN-2014), TOLLerant. Toll-Like Receptor 4 activation and function in diseases: an integrated chemical-biology approach. 3,122,540€ (Co-I and PI at CIC biomaGUNE). (247,873€ for CIC biomaGUNE).
- Diputación de Gipuzkoa, Research Grant, Q+INMUNO T+D "Evaluación Teragnóstica por Imagen Nuclear de Nanoplataformas para Quimio e Inmunoterapia". (PI). 77,000 €.
- Basque Government. Equipment Grant. Application of ICP-MS for detection and quantitation of nanomaterials in vitro and in vivo. (Co-PI), € 78,290.
- Basque Government. MV_201A4S_10_C3I9. Nanoparticles decorated with shark VNAR “nanobodies” for diagnostic and therapy applications. (PI) 9,973 €. Collaborative grant with Elasmogen Ltd and Scottish Biologics Facility at University of Aberdeen.
